1	lower amount of education related to the changes because of severity can end up causing more damage and exposures. Specifically public health facilities.	7/20/2020 1:22 PM
2	My concern is that people in the younger generation, my 90s generation or younger are being judged because we might always wear masks but being blamed for the spike. Majority of us do actually self conscious of our surroundings and the people. It's those who don't ruin it for the rest of us or don't care or think this as a hoax or a way for our government to control what we do since you already try to do with abortion and other things. This is my concern! Nurses are being recognized, doctors but CNAs or PCTs, CMAs we don't get recognized. We are under appreciated, nurses have a whole week we have one day. Yet we work just as tirelessly to care for patients and this spike increases and yet we still have to work while everyone has had to work from home or loose their job!. 31	The isolation has gone on too long for residents, especially dementia ones. They're not social experiments. Our facility has made exceptions for people's families to enter when it's not time for "end of life care", and have told others that's not a possibility for their families because it regards "psychosocial needs". EVERYBODY has psychosocial needs & I think it should be up to them. At least 2 people per person approved for visits.	7/17/2020 8:39 AM
